

## Program 3 - smallsh

### Compile Instructions

Nothing fancy here. It is all in one file, main.c.

#### Steps:

1. Have p3testscript and main.c submission in the same directory (not home dir for testing).
2. Make sure you have exe permissions on test script :)  
(**chmod +x ./p3testscript**)
3. Compile main.c with gcc to executable named smallsh with the following command:

**gcc -o smallsh main.c**

4. Run p3testscript :) —> **p3testscript**

**Enjoy!**
